Summary:

Applied AI engineer and full-stack product builder specializing in multimodal pipelines, LLM-powered applications, computer vision, and large-scale data collection. Built and deployed AI systems used by hundreds of thousands of people, aggregated and processed millions of rows of training data, and implemented custom automated workflows leveraging bespoke models to save countless hours of work. Former venture-backed founder with a track record of going from 0 to 1 and beyond.

Professional Experience:

AI & Software Engineer

Freelance
2021-2026

- Engineered an end-to-end data scraping and LLM training pipeline for *Digital Void*, fine-tuning three models on 100,000+ programmatically scraped samples and shipping a viral web experience that garnered 100,000+ users in under a week.
- Planned and executed a bespoke Python ML video transcription and analysis pipeline powered by a custom, higher-fidelity rebuild of Whisper for the online publication *Reboot*, saving over 200 hours of manual research.
- Built and managed the full web stack to productize Hyperpan's computer vision research, deploying Flask and OpenCV based compute servers alongside a Svelte and Vercel frontend to make its ML tools publicly accessible, fast, and intuitive.
- Created a series of AI-forward UX prototypes for *Bumble*, assisting their development of new LLM-powered interfaces.
- Led workshops on leveraging AI development tools for data scraping and coding efficiency for *Anthropic* and *Rhizome*.
- Worked as the Artist-In-Residence at Websim, an AI website and game creation tool, beta testing new features and integrating directly with the engineering team to ideate and bring fresh AI-native experiences to market.
- Wrote the software, hardware interface, and data collection workflow for an astronomy-based installation for the SF Exploratorium, integrating multiple disparate academic databases, specialized printer tooling, and QA-hardened UX.
- Built the backend AST analysis and parsing engine for Caribu, an Electron-powered desktop app that helps teams migrate monolithic codebases to microservice architectures

Co-Founder & CEO

Hachi
2023-2024

- Secured \$900k in venture funding to build a first-of-its-kind creator collaboration platform, successfully reducing brand-to-influencer deal cycles by 75% (4x improvement) by standardizing deal terms and negotiation flows.
- Directed end-to-end company strategy, encompassing product roadmap, investor relations, and marketing engine.
- Hired and managed a multi-disciplinary team of engineers, designers, and interns through rapid weekly shipping cycles, maintaining high velocity in a fast-paced startup environment as we onboarded thousands of new users a month.

Digital Marketer & Social Manager

Within, Taskforce, and
Freelance
2018-2021

- Managed \$5M+ in aggregate e-commerce spend for global brands including *Nike*, *Hugo Boss*, and *Vroom*, consistently optimizing for ROAS and customer LTV across all major programmatic acquisition channels.
- Engineered a custom content-pipeline to manage 25+ creators for *Taskforce*, designing the internal workflow and hiring tools and personally onboarding them, resulting in 50M+ organic views at a highly efficient \$0.30 CPM.
- Steered growth strategy as Interim Head of Marketing for *Blue Kazoo* during a critical leadership transition, maintaining channel stability and scaling performance metrics across platforms.

Projects & Talks:

Projects:

[Traffic Cam Photobooth](#) - Viral site that enables surveillance selfies. [Press.](#)
[First Light](#) - Mining astronomy databases for previously unseen stars.
[AYTA](#) - Exploring bias in AI by training models on r/AITA posts. [Press.](#)
[Goodbye Warden](#) - Shedding light on the last words of the executed.
[Dimensions](#) - An 8-foot wide pen plot of the first black hole simulation.
[Heavyweight](#) - Using the aesthetics of the law against lawyers. [Press.](#)
[The Little Tok of Horrors](#) - Bypassing TikTok upload limits. [Press.](#)

Talks:

Big Stars and Small Data, metaLab @ Harvard, MA.
Data as an Artistic Medium, University of Virginia, VA.
[The Aesthetics of the Law](#), Rhizome 7x7, Cornell Tech, NYC.
[Modeling the Language of Money](#), Gray Area, SF.
Scraping and Using Government Data, NYU, NYC.
Virality Driven Development, Betaworks, NYC.
Not So Artificially Intelligent, Part + Sum, NYC.

Awards & Honors: [Webby Award Winner](#) (2025) & [Honoree](#) (2026), [Tiny Award Finalist](#) (2025), [Rhizome 7x7 Invitee](#) (2025)

Education & Skills:

Education: Williams College, 2018. Science and Technology Studies & Political Science. Highest Honors.

AI/ML: LLMs, CV, RAG, PyTorch, OpenCV, StableDiffusion, Whisper, fine-tuning, agentic harnesses, MCP, LoRA, web scraping, tool use, skill creation.

Languages / Frameworks: TypeScript, JavaScript, Python, Node.js, Flask, Express, React, Svelte, Django, HTML, CSS, SQL, Bash, CI/CD, Jest, REST.

Tools / Platforms: AWS, DigitalOcean, Azure, GCP, Docker, PostgreSQL, Redis, GitHub Actions, Cursor, Claude Code, Codex, Hermes, Xcode.
